Maximum Recovery Kit with Travel Bag \$100.00

Step One:

Laser Enzyme Gel - Cooling gel. Use immediately post treatment until peeling subsides.

Step Two:

Moisturizer— Gentle, light-weight ointment. Forms a light barrier over skin to reduce irritation and speed healing. Apply alone or over Laser Enzyme Gel.

Foaming Facial Cleanser- Gentle enzyme cleanser. Apply water to the face. Gently apply cleanser and allow to sit on skin for roughly 15 to 30 seconds. Foaming process helps remove dry skin.

UV Elements SPF 44 -A physical based sunscreen should be worn daily to protect and prevent skin damage caused by harmful UVB and UVA rays.

Step Three:

Barrier Renewal Complex—Once peeling subsides switch from Moisturizer to Barrier Renewal Complex. May be worn daily under sunscreen and nightly after cleansing. Barrier Renewal Complex works to minimize fine lines and wrinkles while hydrating the skin significantly improving texture, tone and pore size.

Continue to use your Foaming Facial Cleanser and Sunscreen daily.
